- 1. A field grading material consisting of a polymeric matrix provided with a filler, <u>characterized</u> in that the filler comprises a field grading effective amount of particles having at least one dimension smaller than or equal to 100 nm.
- 2. A field grading material according to claim 1, <u>characterized</u> in that the filler comprises a field grading effective amount of particles having one dimension between 2-80 nm, preferably 5-50 nm and most preferably 5-30 nm.
- 3. A field grading material according to claim 1 or 2, <u>characterized</u> in that said particles are of any semiconducting material having an energy bandgap larger than 0 eV and smaller than 5 eV, preferably ZnO or SiC.
- 4. A field grading material according to claim 1 or 2, <u>characterized</u> in that said particles are of any material where the bulk has a dielectric constant at infinitely high frequencies of at least 5, preferably Al₂O₃, TiO₂ or BaTiO₃.
- 5. A field grading material according to any of the preceding claims, <u>characterized</u> in that said particles are particles having an aspect ratio of more than 1, preferably of more that 5 and most preferably of more than 10.
- 6. A field grading material according to claim 5, <u>characterized</u> in that the particles having an aspect ratio of more than 1, preferably of more that 5 and most preferably of more than 10, are randomly oriented in the matrix.
 - 7. A field grading material according to claim 5, <u>characterized</u> in that the particles having an aspect ratio of more than 1, preferably of more that 5 and most preferably of more than

- 10, are oriented in essentially the same direction in the matrix.
- 8. A field grading material according to any of claims 5-7, <u>characterized</u> in that said particles having an aspect ratio of more than 1, preferably of more that 5 and most preferably of more than 10, are provided in the form of fibres, fibrils, whiskers, flakes, ellipsoids or tubes.
- 9. A field grading material according to any of the preceding claims, <u>characterized</u> in that said particles constitute less than 40% by volume, preferably less than 30% by volume and most preferably less than 20% by volume of the field grading material.
 - 10.A field grading material according to any of the preceding claims, characterized in that the matrix essentially consists of rubber, thermoplastics or thermoplastic elastomer.
- 20 11.A field grading material according to claim 10, <u>characterized</u> in that the matrix essentially consists of polyolefin rubber or thermoplastic polyolefin elastomer/plastomer, preferably including EPDM (Ethylene Propylene Diene Monomer) rubber or silicone rubber, or of crystalline thermoplastics, preferably polyethylene.
 - 12.A device for grading an electric field in high-voltage applications, **characterized** in that the device comprises a field grading material according to any of claims 1-11.
 - 13.A method for grading an electric field at a joint or termination of an electric power cable, <u>characterized</u> in that a body of a field grading material according to any of claims 1-11 is introduced in the cable joint or cable termination.
